Northern Lights Commercial Series Generator Sets

Clean Power. Clear Air. Complete Comfort.

For five decades, Northern Lights generator sets have been working for people who work on the water.

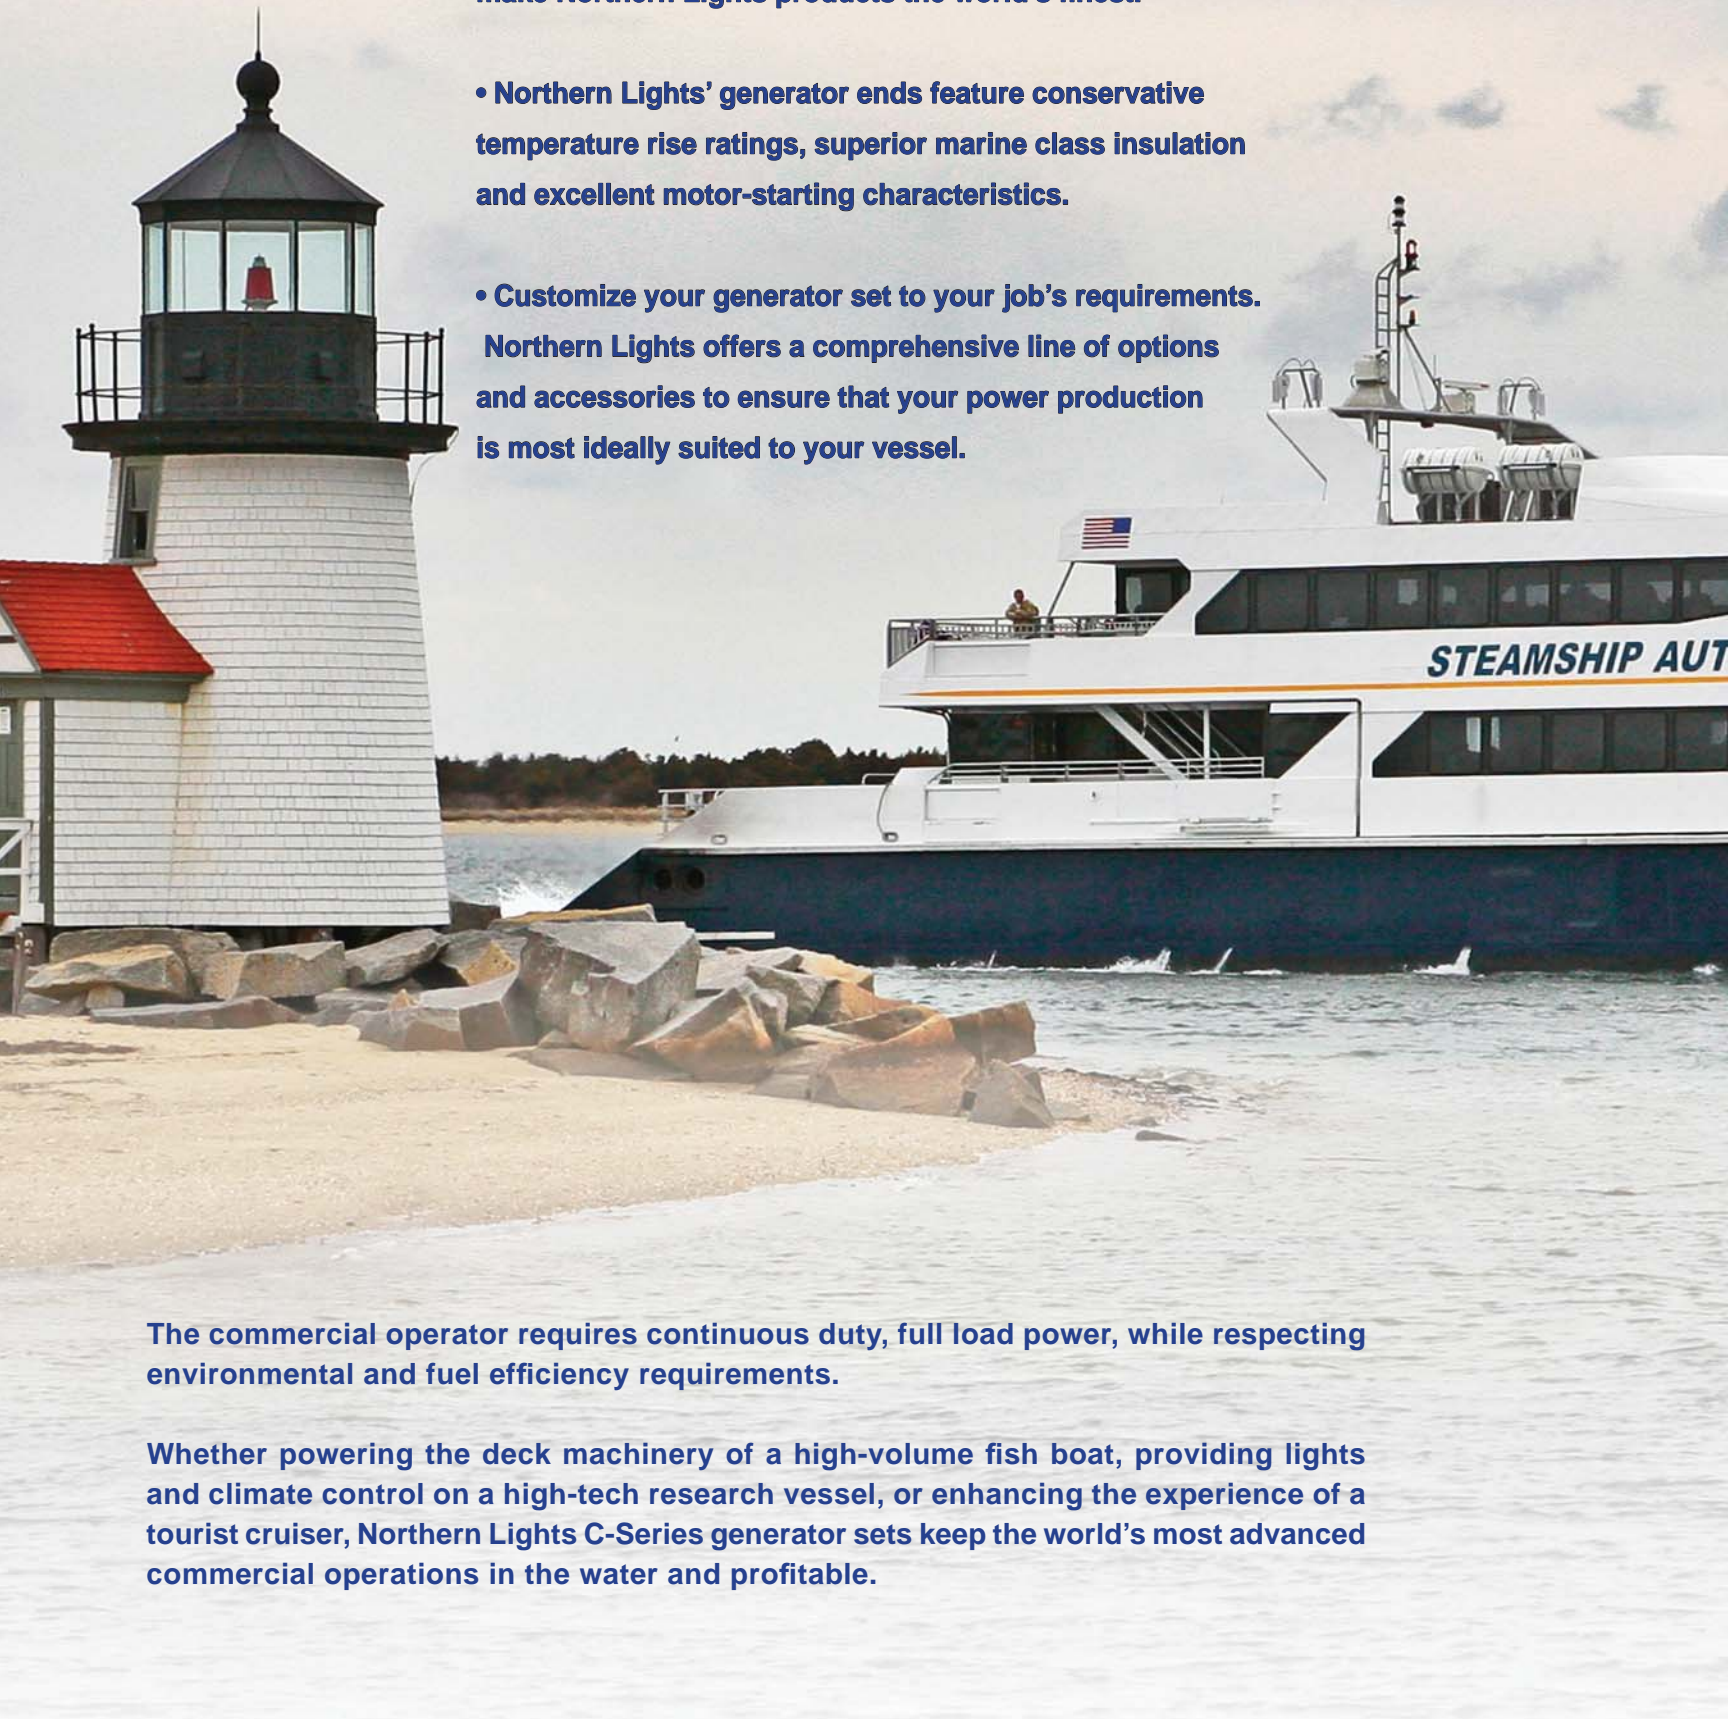

- Our Commercial Series generator sets are based on tested Luger diesels. Luggers produce high-torque at 1800 rpm to ensure long-life reliability. Outstanding components - including liquid cooled turbos, cast-iron exhaust manifolds and gear driven seawater pumps - help make Northern Lights products the world's finest.

- Northern Lights' generator ends feature conservative temperature rise ratings, superior marine class insulation and excellent motor-starting characteristics.

- Customize your generator set to your job's requirements. Northern Lights offers a comprehensive line of options and accessories to ensure that your power production is most ideally suited to your vessel.

The commercial operator requires continuous duty, full load power, while respecting environmental and fuel efficiency requirements.

Whether powering the deck machinery of a high-volume fish boat, providing lights and climate control on a high-tech research vessel, or enhancing the experience of a tourist cruiser, Northern Lights C-Series generator sets keep the world's most advanced commercial operations in the water and profitable.
